+1 704-606-4541 | srijit316@gmail.com | [linkedin.com/in/srijitbanerjee04](https://www.linkedin.com/in/srijitbanerjee04)

EXPERTISE

- Strong background in Java, Python, and web technologies (React JavaScript), with hands-on experience developing scalable applications and APIs.
- Built Voice AI systems and conversational agents using LLM APIs and ElevenLabs, enabling real-time interaction and automated evaluation.
- Proficient in predictive modeling, statistical analysis, and generative AI, with experience in applying models to real-world datasets.
- Strong track record of communicating technical insights clearly, working across teams, and delivering impactful, data-driven solutions.

EDUCATION

Davidson College

Bachelor of Science in Computer Science & Economics minor, 3.91 CGPA

Davidson, NC

May '26

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL, C, C#, JavaScript, R, HTML/CSS

Developer Tools: Git, AWS, VS Code, REST API, Google Cloud, n8n

Frameworks & Libraries: React, Node.js, TensorFlow, NumPy, Pandas, Streamlit, Matplotlib, PyTorch, Selenium, Scikit-learn

EXPERIENCE

Seattle Orcas (Major League Cricket)

Data & Operations Intern

United States

May '26 – Jul '26

- Transformed a manual booking process (50-person roster) into a pipeline that triggers AI agents to book flights, hotel rooms, and daily transportation, saving \$10k in booking and cancellation fees.
- Owned end-to-end inventory management for player and staff kits and marketing merchandise, tracking stock and distribution across games to support \$6k in stadium merchandise sales during the season.
- Coordinated player media commitments and brand sponsorship schedules across the season, ensuring the team met sponsor obligations and kept key partners satisfied.

CaseMock <https://casemock.ai/>

Founder

Davidson, NC

Jan '26 – May '26

- Built a consulting interview simulator with real-time voice interaction and automated feedback, reaching 100+ users who lacked access to realistic interview prep.
- Designed an agent evaluation pipeline using ElevenLabs and n8n to generate adaptive follow-up questions and score responses against consulting rubrics, delivering structured feedback that candidates previously could only get from paid coaches or peers.
- Won \$3,500 from the Davidson College Entrepreneurship Center pitch competition, validating demand for affordable, realistic interview prep among students without access to it.

Deloitte

Technology & Innovation Intern

Remote, India

June '25 – Aug '25

- Developed training modules with HTML on Deloitte software assets to equip 1000+ employees with key digital capabilities, resulting in faster digital adoption and improved workforce productivity.
- Built a Python-based reporting tool to analyze asset adoption metrics from internal systems, enabling managers to monitor usage for 12 core assets.
- Led internal outreach initiatives for the Asset Adoption Campaign, engaging 50+ Partners and Executive Directors to champion adoption, boosting integration and usage of assets across business units.
- Streamlined knowledge-sharing workflows by curating user-friendly resources and feedback channels, which improved consultant onboarding efficiency and reduced support queries by an estimated 20%.

Precisely Software Incorporated

Sales Engineer Intern

Burlington, MA

Jun '24 – Aug '24

- Leveraged REST APIs and internal product capabilities (Data 360 Analyze) in Python to automate the authentication of sales engineers, speeding up the onboarding process 20x.
- Created demonstration videos to simplify Precisely's software features, enabling 500+ clients to adopt the tools more effectively.
- Implemented cross-functional communication to troubleshoot problems and develop a comprehensive automated data integration workflow, accelerating my team's project completion by 30%.
- Shadowed 15+ live customer calls to understand client pain points, enabling delivery of solutions tailored to user needs.

PROJECTS & LEADERSHIP

Basketball Win Probability Model

Data Science Research Intern

Davidson, NC

Feb '24 – May '24

- Engineered a real-time win probability model for men's college D1 basketball using Pandas and Scikit-learn, combining Colley rankings with in-game features (team momentum, scoring trends, game context) to predict outcomes across 2,500+ games.
- Validated model accuracy by comparing predictions to ESPN's win probability model across several games, achieving a close match in outcome predictions and reaching up to 85% consistency with industry-leading ESPN forecasts.

Data CATS

Consultant

Davidson, NC

Jan '25 – May '26

- Tutored 100+ students in data-related computer science and economics topics, simplifying complex concepts to improve coursework understanding.
